

Supply Planning

Assess the resilience, responsiveness, and profitability of plans before, during, and after every operational decision

Supply Chain agility is essential when creating flexible supply networks that effectively respond to dynamic customer demand and ever-increasing uncertainty. Planners need to identify ways to **increase alertness and responsiveness** through fluctuating costs and changing supply networks. Enterprises must also foster a **faster, more innovative culture** to ensure the agile Supply Chains of the future will be those that can react promptly to unexpected events, changes, and delays to **fulfill customers' expectations, outperform the competition, and accelerate progress.**

Board enables you to achieve this ideal state, offering an **Enterprise Supply Planning solution** that helps you **drive resilience, responsiveness, and profitability** at every stage.

Your complete Supply Planning solution

Dynamic Scenarios

Easily create and test different strategic, operational, and financial scenarios to quickly identify the best course of action.

Validated and approved alternatives

Generate workflow-controlled contingency plans in advance, ensuring approved alternative options are available when required.

Enterprise adaptive plans

Be notified automatically of potential supply issues and immediately adapt your plan to suit, mitigating potential risks.

An Enterprise Supply Planning approach

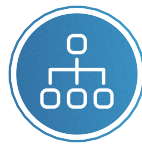

Support strategic sourcing decisions

Easily manage make or buy, off-shoring, re-shoring, and shared services decisions.

Enriched procurement planning

Generate a procurement plan within a collaborative environment across all supply chain processes.

Improve category management

Support all category management process steps and governance allowing for SKU rationalization.

Enhance capacity & production planning

Streamline capacity & production planning from strategy to execution to properly target business goals.

Modernize your inventory planning

Streamline warehousing practice through inventory planning which orchestrates the inflow and outflow of raw materials and products across the entire supply chain.

Trusted by leading organizations

High-performing supply chain teams use Board to optimize their planning processes.
